

Day 6 - Development Preparation & Staging Environment Setup

Deployment Details:

- **Hosting Platform:** Vercel
- **Repository Link:**
<https://github.com/SitesByKashan/Nike>
- **Staging URL:** <https://hackathon3-nike.vercel.app/>

1. Hosting Platform Setup:

- Chose Vercel as the hosting platform.
- Linked the project repository from GitHub to Vercel for deployment.
- Set up build configurations and securely integrated environment variables for development.

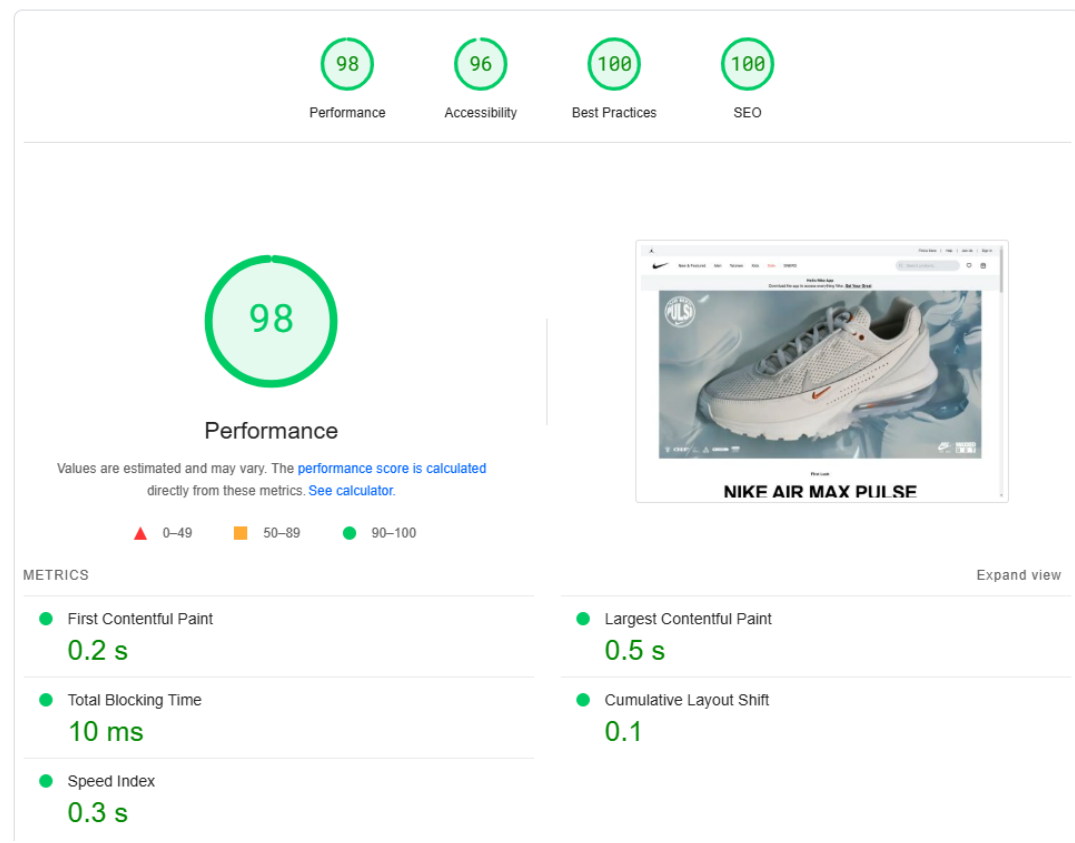

2. Environment Variables:

- Defined a .env file with essential keys, including:
- NEXT_PUBLIC_SANITY_PROJECT_ID: Identifier for the Sanity project.
- NEXT_PUBLIC_SANITY_DATASET: Name of the production dataset.
- API_KEY: Authorization key for third-party integrations.
- Safely uploaded the environment variables to Vercel's secure storage.

<>	NEXT_PUBLIC_SANITY_PROJECT_ID All Environments	⦿	Added Jan 22		...
<>	NEXT_PUBLIC_SANITY_DATASET All Environments	⦿	Added Jan 22		...
<>	SANITY_API_TOKEN All Environments	⦿	Added Jan 22		...
<>	STRIPE_SECRET_KEY All Environments	⦿	Added Jan 22		...
<>	NEXT_PUBLIC_STRIPE_PUBLIC_KEY All Environments	⦿	Added Jan 22		...

Performance Testing Report

1.Desktop Performance:

2. Mobile Performance:
